over the past 100 years the european automotive industry has been repeatedly challenged by best practice first by the united states through the development of mass production pioneered by henry ford and more recently by lean production techniques as practised by the leading japanese producers particularly toyota it has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world class products however the european dustry is now faced with growing competition and growth from new emerging low cost countries and needs to re define its competitive advantage to remain at the forefront of the sector automotive growth is driven by two factors new m kets and new technologies global competition is increasing with technology and product differentiation becoming the most important sales factors but with c tinued cost pressure within the market the winners will be more profitable and the losers will disappear the automotive industry makes a significant contribution to the socio economic fabric of the european union manufacturing output represents 700 billion and research and development spending 24 billion european automotive suppliers number 5000 member companies and represent 5 million employees and generate 500 billion in revenues these are significant figures that generate wealth and high value employment within the eu european firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets

heavy industrialization in the past few decades has caused several global environmental issues including poor air quality climate change and outdoor air pollution related diseases as such consumer pressure coupled with strict governmental policies have influenced firms to adopt and implement green practices in their supply chain and business operations in order to improve socio environmental sustainability global perspectives on green business administration and sustainable supply chain management is an essential reference book that discusses innovative green practices including recycling remanufacturing reduction in waste and adoption of renewable energy in manufacturing it also examines environmentally friendly policies that have been adopted by many european and western countries featuring coverage on a broad range of topics such as energy analysis environmental protections and logistics development this book is ideally designed for managers operations managers executives manufacturers environmentalists researchers industry practitioners academicians and students

this book was born from curiosity to begin with it was the curiosity of an economist who studied in the 60 s in an environment which has subsequently developed from national into global economics who has to recognize that politicians scholars and large segments of society oblivious to supranational authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy and pretend as though their own national state were still the master in its own house that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which rooms all that has become fiction the laws of globalization diminish the manoeuvring space for shaping national economic policy even if many folks today don t want to hear it the issue is no longer achieving what is socially politically desirable for the own society but rather the optimal adaptation of society and social benefits to the politically practicable

the book deals with pros and cons of globalization and its focus extends both to the home and host countries while globalization has been beneficial it has not been without challenges for both home and host countries there are many areas where the host countries tend to benefit significantly from globalization the interface with the global economy unleashes a lot of positive energy in the economic systems of the affected countries particularly in the host country s economy the book deals with the challenge of immigration which the developed countries are facing as an offshoot of inclusiveness that comes with globalization increased debt intensity in some of the developed economies have resulted from their integration with the world economy which many countries have witnessed since early 1990s the book also delves into how the phenomenon of globalization has been leveraged by some countries more than others while us has been the leader in unleashing globalization india an effervescent democracy have gained substantially from this trend having significantly developed its professional competencies
